How to help your child revise – some ideas for parents

Introduction

There are a lot of books on 'What to revise' but very few on 'How to revise'. Although many teachers advise and help students to revise, many parents like to get involved. This guide is a summary of different ideas that work to help students learn.

Learning is a very individual skill. Some people can read a text and remember, most need to reinforce through a variety of techniques. There is no doubt that revising and exams are stressful but this does not mean they have to be completely boring.

Most children want support but they do not always know how to ask for it. By even taking an interest in their study you will be helping. Be prepared for mood swings and temper tantrums and try to remember it is the stress of the exams and not you that is causing it.

If you work through this guide and tell your child that you can help them with this technique you will be helping them. Providing encouragement and guidance (and occasional nagging to get on) will all help.

We hope this guide helps to provide some ideas for the future.

Topic Planner

The topic planner is a starting point for focusing revision. It is a way of helping to focus notes, tracking what needs to be done and showing when revision has taken place.

Revision Time-Table

Students should be working and **working regularly**. Occasionally dipping into their notes and last minute cramming are not effective ways to revise. The sooner the revision starts, the more reinforcement of learning there is.

Regular revising results in reinforcement.

Students should be working for two hours every night. They need to have relaxation time and regular times to eat. If not, the brain will not concentrate and any revision could be futile as learning will not take place.

A suggestion is to stick it the timetable on the fridge or above the television. There's not a teenager who does not visit these places regularly!

Some Techniques to consider

Mind-mapping and diagrams

These should be colourful diagrams that help to break larger chunks of information into smaller areas. They should use images to help link ideas.

Flow diagrams help students to organise information into an order.

Time-lines are particularly good for dating events in the correct order.

Prompt Cards/Revision Cards/Colour Cards

Again a way to break the notes into manageable chunks.

Revision cards should contain:

- Keywords
- Important places or terms
- Core concepts
- Main points
- Possible questions

Prompt cards have a key question/topic or clue on one side and the answer on the other. The student can design these, give them to someone else and get them to test them.

Colour coded cards can be used to order topics depending upon confidence. Just like traffic lights, green cards are used for information that they are confident with, orange for unsure/partial understanding and red is for needs attention.

Recording notes onto tape

In this case the notes that have been made are read onto a tape or another recording device and then they can listen to them. This coupled with doing another activity and not just sleeping can help.

Pop tune notes

Again for more musical and creative individuals the key ideas or themes can be put into rhymes, raps or pop tunes.

Story telling

Here the child tries to learn key ideas and themes through making up a story. This could be based upon a real story that they know well but if they are really creative they can make their own story up.

Post it notes around the house

Although you may have spent the past 16 years telling your child not to leave a mess, please forgive them with this one. Encourage them to stick post-it notes of key terms and vocabulary that they can be splattered around the house – especially the fridge.

Acronyms/Mnemonics

A way of trying to remember lists. For example, Mary Vickers Eats My Jam Sandwiches Under Nelson's Pillar is the mnemonic for Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, Neptune, Pluto.

Making Posters

Make a poster of key facts/formulas and put it on your bedroom wall to help you revise as you get dressed. Everyone can remember what their room looks like and it is a good visual way of remembering small pieces of information.

The internet

There are many websites that can be visited. These can be used effectively but try to monitor to avoid the temptation of games and social networking (unless it's about revision!) Not all revision should be done this way.

GCSE Pod

This is a resource the school has purchased for all pupils to use. Year 10 and Y11 Pupils are to contact the ICT department for their personal logins.

Past questions

These do need to be practised and the student should ensure that they have got these. But these should be used as part of the programme not the whole programme as the temptation may become to answer the questions with the notes always in front of them.

Peer revision/family revising

This is where students work with one another. Encourage your child to:

- Give you a 15 minute lesson on a topic;

- Invite a friend around and design exam questions, team teach and share information.

Revision should not be a lonely experience. Talking and social networking is an effective learning tool.

School revision guides and general revision guides

Try to get hold of one of these for each subject. Read through them and talk to your child about them.

Make sure you know the exam board and specification that your child is doing.

If in doubt or you have any questions or concerns then contact your son's/daughter's teacher via 'Insight' or telephone the school.
